### What's a Zeolite & How Does It Work?

For centuries, the powdered forms of specific zeolites have been used as traditional remedies throughout Asia to promote overall health and well being. The story of the "volcanic rocks" has been passed down from generation-to-generation as more and more people have experienced its life-changing benefits.

Zeolites are natural volcanic minerals with an unique, complex crystalline structure. It's honeycomb framework of cavities and channels (like cages) works at the cellular level trapping, heavy metals and toxins. In fact, because it is one of the few negatively charged minerals in nature, zeolites act as magnets drawing toxins to it, capturing them in its cage and removing them from the body.

### Pricing:

Liquid zeolite- Retail: 3-bottles - \$154.95 / 1 bottle - \$57.95 + shipping & tax - Purchase retail, [click here](#)

Wholesale / Distributor - 3-bottles - \$130.00 / 1 bottle - \$48.00 + shipping & tax

Each bottle contains 300 drops of liquid zeolite. Most people including autistic children consume from 10 drops to 30 drops per day (spread out at minimum of twice per day, preferably 3X per day).

At 10 drops per day, a bottle lasts about 1 month. At 30 drops per day, it lasts about 10 days. While some parents, see results with doses as low as 1 drop per day, the single most consistent reason parents don't see results is using too low of a dose.

If you do not see positive results within a couple weeks of reaching your plateau dose, you likely need to consider increasing the dose. The father of a 4 year old has received excellent results with 5 drops every 90 minutes 9X/day - total 45 drops per day.

It is recommended to use liquid zeolite at least 4 months with therapeutic level doses before deciding if you are noticing results.

Preferred method to order is through this secure link, [click here](#), or you may call us at (719)635-2000 (9am - 8pm Mountain time) and we will place your order for the distributor price through our account without your need to sign up.

The company will ship it to you directly.

If you wish to be a distributor, sign up by calling us or through this link. By doing so, you will be helping to fund research such as this study. [Click here to sign up as a distributor.](#)

Dosage protocol in the clinical trial

NOTE: The information below has been requested. Including it does not mean we are recommending or suggesting this dosing schedule. Pay close attention to the notes below. Monitor your child and adjust the dose accordingly. Nothing on this site is to be take as medical advice or recommendations. See our Terms of Use for this site.

Liquid Zeolite Usage for those with autism disorders

Schedule below is being used by the Zeolite Autism Clinical Trial.

Be sure to review comments at the end of section and adjust according to individual situation and according to the instructions of your doctor.

The dosage will follow this schedule:

1. Days 1 &ndash; 4: two (2) drops 3X per day (daily: 6 drops)
2. Days 5 &ndash; 7: three (3) drops 3X per day (daily: 9 drops)
3. Days 8 &ndash; 10: four (4) drops 3X per day (daily: 12 drops) &ndash; max dosage, ages <5
4. Days 11 &ndash; 13: five (5) drops 3X per day (daily: 15 drops) &ndash; max dosage, ages 5 to 7
5. Days 14 &ndash; 16: seven (7) drops 3X per day (daily: 21 drops) &ndash; max dosage, ages 8 - 10
6. Days 17 &ndash; 19: eight (8) drops, 3X per day (daily: 24 drops) &ndash; max dosage, ages 11 to 13
7. Days 20 &ndash; 90: ten (10) drops, 3X per day (daily: 30 drops) &ndash; max dosage, ages 14 & older

Note 1: The maximum dosage is age dependant. When the child reaches the maximum dosage, the child will stay at that dosage unless a change has been recommended by their assigned investigator. If there have been no positive benefits observed for a period of at least two weeks at the current max dosage and the child is tolerating the product acceptably as determined by the assigned investigator through personal contact, then, under the guidance of the investigator, the dosage will be steadily increased until: (a) positive benefits are being observed, (b) adverse responses required a reduction in dosage, or (c) a maximum daily dosage of 45 drops per day has been reached.

Note 2: At any point, if the subject is experiencing detoxification effects such as hyperactivity, inability to sleep, lethargy, rashes, etc. which in last more than 3 days the parent has the option to skip from one to three doses, and then to start back at the next lower dosage. Maintaining the lower dosage for six days before returning to the standard schedule. With the Investigator's agreement, schedule for any individual subject can be altered if this is determined to be in the subject's best interest.

Other comments from a doctor who has used liquid zeolite with over 50 ASD patients:

"In my experience, there can be a wide variability in the kids' tolerance for it. I have kids less than two who are responding nicely to 10 drops 3X daily and older kids who detox like crazy on 5-6/day. There can be an initial response that is encouraging at 9/day and then a plateau which breaks with a much higher dose. Offhand, I would say in the 50 or so kids I have treated with it all have responded to some degree but the dose has to be gradually increased as the toxic burden decreases and the dose tolerance increases to see continued improvement."

"With some of the more metabolically fragile kids a detox reaction can occur very quickly with small doses. I have a couple of kids on less than a drop a day because that is all they can handle. The three day wait time for any observed detox rxn may have to be adjusted on an individual basis. The investigators should be aware that changes can occur quite quickly and dramatically. To the extent possible the kids should increase their fluid intake to minimize this. I would also recommend that there be the flexibility to increase the dose beyond the age ranges if little or no changes occur. I can't remember any of my cases offhand that haven't responded in some way to a jump in dose when they haven't budged or have plateaued. I know of 3 cases of non responders (including diet, supps and prolonged chelation with conventional agents) who have shifted with the zeolite because of a gradual increase in dose."

&ldquo;I think the main lessons I have learned about zeolite in the last six months are to start low, incrementally increase the dose according to the kids individual tolerance and to keep increasing the dose in the stalled, but improved cases regardless of size or age. I have a kid who made a major jump in social interaction when we went from 10 gtts tid to 15 tid. He had improved significantly going up to 10 and was at 10 tid for about 6 weeks and was stalled. After a few days on 15 tid he came home from school, put on his bicycle helmet and said he was going to his friends house to play in a totally normal way. that blew his mom and dad and me away.&rdquo;
